Tell Your AI Exactly What to Automate

What Are These Prompts?

These are complete, ready-to-send prompts that tell your AI exactly how to set up automated scheduled tasks — called cron jobs — on your system.

A cron job is simply a task that runs automatically on a schedule. Your AI CEO can run these in the background without you lifting a finger: morning briefings posted while you sleep, nightly summaries filed before midnight, weekly reviews waiting for you on Sunday evenings.

How to use these prompts:

1. Copy the prompt from the code block
2. Paste it directly into your `#operator` Discord channel (or wherever you chat with your AI)
3. Send it — your AI will handle the rest
4. Confirm your timezone is correct before sending

Replace `[YOUR_CHANNEL_ID]` with the actual Discord channel ID from your server. Replace `[YOUR_TIMEZONE]` with your timezone (e.g., `America/New_York`, `America/Los_Angeles`, `America/Chicago`, `America/Phoenix`).

Prompt 1: Nightly Memory Extraction

What this does: Every night at 11pm, your AI reviews the day, extracts any new durable facts or important context, updates your MEMORY.md file, and posts a structured nightly summary to your Discord. This keeps your AI's long-term memory sharp and your context fresh for the next morning.

Schedule: 11:00 PM daily

Expected output: A nightly summary message in your `#nightly-review` channel including: key activities from the day, any new facts added to memory, open tasks carried forward, and a readiness confirmation for tomorrow.

Set up a cron job called "nightly-memory-extraction" that runs at 11:00 PM every day in the [YOUR_TIMEZONE] timezone.

When it runs, the job should:

1. Review the full activity from today's sessions – what was worked on, what was completed, what was discussed
2. Extract any durable facts that should live in long-term memory, including: new information about my preferences or working style, decisions that were made and their reasoning, new context about active ventures, tool or system changes, and any important contacts or relationships mentioned
3. Update MEMORY.md with the extracted facts under the appropriate section headers – do not overwrite existing content, only add or refine
4. Update ACTIVE_TASK.json to reflect the final status of any tasks touched today
5. Post a nightly summary to Discord channel ID [YOUR_CHANNEL_ID] with the following sections:
 - 📅 Today's Summary: 3–5 bullet points of what was accomplished
 - 🧠 Memory Updates: what was added or updated in MEMORY.md (if anything)
 - 🔁 Open Loops: any tasks or items carrying forward to tomorrow
 - ✅ System Status: confirmation that memory extraction is complete

Keep the summary concise and scannable. This should take no more than 2–3 minutes to read.

Prompt 2: Morning Briefing

What this does: Every morning at 8am, your AI reads your MEMORY.md, ACTIVE_TASK.json, and any overnight activity to build a personalized morning brief. It then posts that brief to your Discord so you wake up — or start your day — already oriented. No more scrambling to remember where you left off.

Schedule: 8:00 AM daily

Expected output: A structured morning brief in your `#morning-brief` channel including: top priorities for the day, status of open tasks, any time-sensitive items, and one "focus recommendation" for the highest-leverage move of the day.

Set up a cron job called "morning-briefing" that runs at 8:00 AM every day in the [YOUR_TIMEZONE] timezone.

When it runs, the job should:

1. Load and review SOUL.md, IDENTITY.md, MEMORY.md, USER.md, and ACTIVE_TASK.json
2. Identify the current open tasks and their status
3. Review any messages or activity that happened since the last session
4. Generate a morning briefing and post it to Discord channel ID [YOUR_CHANNEL_ID]

The morning brief must include:

- 🇪🇺 Good morning message with today's date and day of week
- 🎯 Top 3 Priorities: the three most important things to focus on today, in order
- 📌 Open Tasks: any in-progress or blocked tasks with current status
- ⚡ Focus Recommendation: one specific, high-leverage action that will create the most momentum today – be direct and specific, not generic
- 📅 Time-Sensitive Items: anything with a deadline or time constraint today (if any)
- 💬 Ready: a short confirmation that the system is loaded and ready

Write the brief in a direct, executive tone. No fluff. Prioritize clarity and actionability over length.

Prompt 3: Weekly Performance Review

What this does: Every Sunday at 6pm, your AI conducts a structured review of the week — what was accomplished, what stalled, what decisions were made, and what the highest-leverage improvement for next week should be. It posts a full weekly review to your strategy channel so you always start Monday oriented.

Schedule: 6:00 PM every Sunday

Expected output: A weekly review post in your `#strategy` channel with: accomplishments, what didn't happen and why, decisions made this week, one key insight, and one top recommendation for next week's focus.

Set up a cron job called "weekly-performance-review" that runs at 6:00 PM every Sunday in the [YOUR_TIMEZONE] timezone.

When it runs, the job should conduct a structured weekly performance review and post it to Discord channel ID [YOUR_CHANNEL_ID].

The weekly review must include:

🇺🇸 WEEKLY PERFORMANCE REVIEW – [Week ending date]

1. ACCOMPLISHMENTS: List every meaningful task or milestone completed this week. Be specific – not "worked on marketing" but "completed competitor analysis for venture X."
2. WHAT DIDN'T HAPPEN: Identify tasks that were planned or expected but did not get completed. For each one, identify the root cause – was it deprioritized, blocked, unclear, or just not started?
3. DECISIONS MADE: List any significant decisions made this week and their key rationale. These should be recorded in MEMORY.md if they aren't already.
4. KEY INSIGHT: One observation about patterns in this week's work – what's working well, what's consistently getting stuck, or what unexpected signal appeared.
5. TOP RECOMMENDATION FOR NEXT WEEK: One specific, high-leverage priority for the coming week that will create the most meaningful forward momentum. Explain why this is the right focus.
6. SYSTEM HEALTH: Brief confirmation that MEMORY.md, ACTIVE_TASK.json, and all identity files are current and accurate.

Write this as a direct executive summary. The goal is insight and decision-readiness, not a log of activity.

Prompt 4: Content Idea Generator

What this does: Every Monday at 9am, your AI reviews your active ventures, recent activity, and current trends to generate 5 targeted content ideas for the week. It posts them to your `#content` channel so you always have fresh, relevant ideas waiting when you sit down to create.

Schedule: 9:00 AM every Monday

Expected output: 5 content ideas posted to your `#content` channel, each with a suggested title/hook, a brief explanation of the angle, and the recommended format (short video, long video, blog post, social post, etc.).

Set up a cron job called "content-idea-generator" that runs at 9:00 AM every Monday in the `[YOUR_TIMEZONE]` timezone.

When it runs, the job should:

1. Review MEMORY.md for current ventures, active projects, and relevant context
2. Consider what topics, angles, and formats would resonate most with my target audience based on what I'm building
3. Generate 5 high-quality content ideas for the week and post them to Discord channel ID `[YOUR_CHANNEL_ID]`

For each content idea, include:

- 📌 Hook/Title: A compelling, specific title or opening hook (not generic – make it punchy and specific)
- 📖 Angle: 2-3 sentences explaining the perspective or story this piece tells
- 📱 Recommended Format: Short-form video (TikTok/Reel), long-form video (YouTube), blog post, LinkedIn post, email, or thread
- 🗓️ Why This Week: One sentence on why this idea is relevant or timely right now

Generate ideas across a mix of formats – don't give me 5 TikTok ideas. Vary the formats and angles.

The tone should be practical and business-focused, matching my voice. These are starting points, not finished scripts.

End the post with: "Reply with a number (1-5) to have me script any of these."

Prompt 5: Lead Follow-Up Reminder

What this does: Every Tuesday and Thursday at 10am, your AI reviews your sales pipeline context from MEMORY.md, identifies any leads or prospects that haven't been followed up with in 3 or more days, and posts a specific follow-up action list to your `#operator` channel. No lead falls through the cracks.

Schedule: 10:00 AM every Tuesday and Thursday

Expected output: A follow-up action list in your `#operator` channel with: specific leads to follow up with, what the last contact was, a suggested follow-up approach, and the priority order.

Set up a cron job called "lead-followup-reminder" that runs at 10:00 AM every Tuesday and Thursday in the [YOUR_TIMEZONE] timezone.

When it runs, the job should:

1. Review MEMORY.md for any sales pipeline information – active prospects, recent conversations, pending proposals, or follow-up notes
2. Identify any leads or prospects that haven't been followed up with in 3 or more days
3. Post a follow-up action list to Discord channel ID [YOUR_CHANNEL_ID]

The follow-up list should include:

📞 LEAD FOLLOW-UP – [Today's date]

For each lead that needs follow-up:

- 👤 Name / Company: Who this is
- 📅 Last Contact: When and how they were last contacted
- 📄 Context: What was discussed or where the conversation stands
- ✉️ Recommended Action: The specific next move – call, email, DM, send proposal, check in, etc.
- ⭐ Priority: High / Medium / Low based on deal stage and likelihood

Sort by priority (High first). If there are no leads overdue for follow-up, post:

"✅ Pipeline clear – no leads are overdue for follow-up. Enjoy the momentum."

If there is no pipeline data in MEMORY.md, post:

"📄 No pipeline data found in MEMORY.md. Update your pipeline context so I can track follow-ups. Tell me about your current leads and I'll log them."

Keep it direct and action-oriented. This is a reminder and task list, not a report.

Automation Setup Notes

Before sending any of these prompts:

1. **Confirm your timezone** — use the standard format: `America/New_York`, `America/Los_Angeles`, `America/Chicago`, `America/Phoenix`, `America/Denver`, `Europe/London`, etc.
2. **Replace all [YOUR_CHANNEL_ID] placeholders** — use the actual Discord channel IDs from your server setup
3. **Have your system running** — OpenClaw must be active for cron jobs to execute

4. **Test manually first** — after setting up any cron job, ask your AI: *"Run the [job name] job now as a test"* to confirm it works before relying on the schedule

Recommended Setup Order

Order	Job	Why
1	Nightly Memory Extraction	Sets up the memory loop — everything else benefits from good memory
2	Morning Briefing	Immediately improves your daily orientation
3	Weekly Performance Review	Closes the weekly loop and builds strategic momentum
4	Content Idea Generator	Activates your content engine
5	Lead Follow-Up Reminder	Activates your revenue engine
